1.4	The reference library software	13
1.5	Documents for download	13

1 Library of References on Solar Combisystems

This report describes the compilation and contents of a literature reference library on the topic Solar Combisystems. The references were gathered from the participants of IEA SH&C Task 26 and entered into a data base using the End Note software. The data base can be downloaded from ftp://ftp.sp.se/public/solarcombisystems_references either as an End Note file (*.enl) or as a HTML or RTF file.

1.1 Background

During the course of IEA SH&C Task 26 a comparatively large number of experts in this field have been working together. The amount of accumulated knowledge is extensive and the essence of it has hopefully been made available through the different deliverables from the project. Nevertheless, there are huge amounts of background material available to those interested, some of it surely adding interesting information to the outcome of Task 26. But left without guidance, the uninitiated knowledge seeker will have difficulties to find the relevant parts. That is where this report is intended to assist. Here, the researchers of Task 26 have accumulated a list of references that can be of interest when studying solar combisystems. The references have been structured in a small data base using a reference library software, also featuring online searching, reference database management and bibliography-making.

1.2 Aim

The aim of this work is to support future scientific work within this field by compiling relevant references and structuring them in a data base. Hopefully, future work will also be integrated in the database. The latter will only be really efficient if it's arranged in a similar manner as here, with an organisation or a research project hosting the database and a responsible person maintaining it. However, anyone interested can of course continue to develop his or her own database, starting from here.

1.3 Contents of the reference library

In all, the library now contains 81 references. The references are categorized in reference types: Books, conference proceedings, reports, journal articles and magazine articles. For each reference some basic information is available: Name of author(s), print year, english title, original title, number of pages, keywords, a short abstract (in most cases) and finally information about where the publication is available. In table 1 below, all references are listed, sorted by author and in table 2 the same references are sorted by year of publication.

Table 1: Contents of the reference library sorted by Author

Author/ Editor Name	Reference Title	Year of publication
	Solare Raumheizungsanlagen	1995
	Tagung Solare Raumheizung	1996
	Tagung Solare Raumheizung 1997	1997
	Tagung Solare Raumheizung 1998	1998
	Tagung Solare Raumheizung 1999	1999

1.4 The reference library software

For the compilation of this database an application software, End Note from Isi Research Soft, has been used. This program can gather and maintain bibliographic references, integrate online searching, reference database management, and bibliography-making and also features Internet connection to hundreds of libraries. Of course, the modest size of this database makes it maybe even easier to maintain in a more general and widespread software. However, the choice of the group was to use this more specialized program.

Three export formats are available: RTF, plain text and HTML

1.5 Documents for download

On ftp://ftp.sp.se/public/solarcombisystems_references the database contents in 3 different formats can be downloaded. The formats are *.enl (the default End Note format), *.txt and *.htm. For those interested in exploring the data base using the End Note program, an 30 days free trial version of the software can be downloaded from <http://www.isiresearchsoft.com/>. Some guidance for the use of the software is also given in the document "references manual.doc" at the ftp-address above.
